

Presentation 24

# Coroutines

# Announcements for This Lecture

---

## Assignment 7

---

- We heard the complaints
  - Task 1 too hard for C-level
  - Task 2 just right for B/B+
- Relaxing **no code rule**
  - Can show for **Task 1 only**
  - Will guide you through it
- Due **December 21**
  - No extensions or lates
  - We have to grade it!

## Lesson Videos

---

- **ALL** all are now posted
  - **Lesson 29** for **today**
  - **Lesson 30** is the last
- Will **not** cover Lesson 30
  - Not relevant for A7
  - Really if going to 2110
  - Last class = Office Hours
- Special lecture **December 10**
  - The “advising” lecture

# More Announcements

---

## Labs

---

- Lab today is **optional**
  - Not required at all
  - But can do for **extra credit**
  - Need 19/23 labs finished
- **No more official labs**
  - Office hours for A7 help
  - Easier than waiting in queue
  - Follows new code rules

## Surveys

---

- Will have a **survey for A7**
- Will also have an **exit survey**
  - Follow up to Survey 0
  - Should I keep the **videos**?
  - Would you rather had a **final**?
- Also the **course evaluation**
  - Comes from engineering
  - Completely *anonymous*
  - But we know if you submit

# From Last Time: Chaining Generators

---

```
def sumfold(input):
```

```
    """
```

```
    Generates the sums of the numbers seen so far in input
```

```
    Example: sumfold([1,2,3]) generates the numbers 1, 3, and 6
```

```
    Parameter input: The input data to sum
```

```
    Precondition: input is a iterable of numbers (int or float)
```

```
    """
```

```
    pass
```

# From Last Time: Chaining Generators

---

```
def sumfold(input):
```

```
    """
```

```
    Generates the sums of the numbers seen so far in input
```

```
    Example: sumfold([1,2,3]) yields 1, 3, and 6
```

For maximum  
**flexibility**

```
    Parameter input: The input to sum
```

```
    Precondition: input is a iterable of numbers (int or float)
```

```
    """
```

```
    pass
```

# From Last Time: Chaining Generators

---

```
def filterdiv(input,n):
```

```
    """Generates all elements of input evenly divisible by n
```

```
    The elements are generated in the order they appear in input.
```

```
    Example: filterdiv([1,2,3,4],2) generates the numbers 2 and 4
```

```
    Parameter input: The input data to filter
```

```
    Precondition: input is a iterable of int
```

```
    Parameter n: The number to divide by
```

```
    Precondition: n is an int"""
```

```
    pass
```

# Activity: Call Frame Time

## Parent Function

## Coroutine

```
def sumfold(lst):
```

```
    """Returns list of sums"""
```

```
32 sum = []
```

```
33 g = pushsum(len(lst))
```

```
34 next(g)
```

```
35 for x in lst:
```

```
36     a = g.send(x)
```

```
37     sum.append(a)
```

```
38 return sum
```

```
def pushsum(n):
```

```
    """Yields sum of all sent"""
```

```
16 sum = 0
```

```
17 for x in range(n):
```

```
18     val = (yield sum)
```

```
19     sum = sum+val
```

```
20 yield sum
```

# Activity: Call Frame Time

## Parent Function

## Coroutine

Sometimes called  
the **driver**

```
def sumfold(  
    """Returns  
32 sum = []  
33 g = pushsum(len(lst))  
34 next(g)  
35 for x in lst:  
36     a = g.send(x)  
37     sum.append(a)  
38 return sum
```

```
def pushsum(n):  
    """Yields sum of all sent"""  
16 sum = 0  
17 for x in range(n):  
18     val = (yield sum)  
19     sum = sum+val  
20 yield sum
```

# Activity: Call Frame Time

## Parent Function

## Function Call

```
def sumfold(lst):  
    """Returns list of sums"""
```

```
32 sum = []  
33 g = pushsum(len(lst))  
34 next(g)  
35 for x in lst:  
36     a = g.send(x)  
37     sum.append(a)  
38 return sum
```

```
>>> x = sumfold([1,2])
```

Assume we are here:

What is the **next step**?

# Which One is Closest to Your Answer?

Try the rest on your own

# Demo: Writing a Coroutine

---

```
def chunkify(input):
```

```
    """Coroutine to break a list into chunks.
```

```
    Each call to send is the number of elements to chunk. At each call,  
    it yields a new list of the size of the number of elements in send.
```

```
    If the size sent is not an int or is  $\leq 0$ , it yields the empty list
```

```
    Parameter input: The data to process
```

```
    Precondition: input is an iterable"""
```

```
    pass
```

# Demo: Writing a Coroutine
